

**REST API call to
Get Weather and Wind Updates from
A Weather API Service**

Contents

1. Overview of REST
2. API call to get current weather at Wylie
3. API call to get Wind conditions at Wylie
4. Final output

Overview of REST

- REST APIs are different from its predecessor SOAP.
- An API is an interface between two systems, how they communicate and interact with each other.
- Web services use HTTP protocol for communicating request and responses.
- They are language agnostic and work on any platform for communication.
- When a system makes a request, a response is generated.
